

AMENDMENTS TO THE CLAIMS

Claims 1-18 (Cancelled)

Claims 19 (Currently Amended) A security system comprising: for use in a plurality of electronic apparatuses including

a first electronic apparatus; and

a second electronic apparatus connected to the first electronic apparatus ~~each other~~ via an apparatus control line,

wherein the second electronic apparatus comprises a second storage device for previously storing a password, ~~and~~

wherein the first electronic apparatus comprises:

_____ a first storage device for previously storing the password; ~~and~~

_____ a control device for (i) requesting the second electronic apparatus to transmit the password stored in the second storage device at an activation of the first electronic apparatus, (ii) receiving the password stored in the second storage device from the second electronic apparatus, (iii) comparing the ~~received~~ password received from the second electronic apparatus with the password stored in the first storage device, and (iv), when the password received from the second electronic apparatus coincides with the password stored in the first storage device, executing a security function so as to start an operation of the first electronic apparatus ~~when the passwords coincide with each other;~~

_____ a display device for displaying a message to a user; and

_____ an input device for inputting the password.

wherein, when the password received from the second electronic apparatus does not coincide with the password stored in the first storage device, the control device displays, on the display device, a request for the user to input the password via the input device,

wherein the control device compares the password inputted by the user via the input device with the password stored in the first storage device, and

wherein, when the password inputted by the user coincides with the password stored in the first storage device, the control device starts the operation of the first electronic apparatus.

Claims 20 (Currently Amended) The security system as claimed in Claim 19, wherein, when the password the control device compares the received from the second electronic apparatus does not coincide password with the password stored in the first storage device, the control device and executes the security function so as to stop the operation of the first electronic apparatus when the passwords do not coincide with each other.

Claims 21 (Cancelled)

Claims 22 (Currently Amended) The security system as claimed in Claim 19-Claim 21, wherein, when the control device compares the password inputted by the user does not coincide with the password stored in the first storage device, the control device and stops the operation of the first electronic apparatus when the passwords do not coincide with each other.

Claims 23 (Currently Amended) The security system as claimed in Claim 19-Claim 21, wherein the control device compares the password inputted by the user a predetermined number

of times of more than two with the password stored in the first storage device, and, when the password inputted by the user does not coincide with the password stored in the first storage device, the control device stops the operation of the first electronic apparatus ~~when the passwords do not coincide with each other.~~

Claims 24 (Currently Amended) The security system as claimed in ~~any one of Claim 19~~
~~Claim 21,~~

wherein the first electronic apparatus further comprises a third storage device for previously storing a special password other than the password stored in the first storage device,
~~and~~

wherein the control device compares the password inputted ~~password by the user~~ with the special password stored in the third storage device, and

wherein, when the password inputted by the user coincides with the special password stored in the third storage device, the control device starts the operation of the first electronic apparatus ~~when the passwords coincide with each other.~~

Claims 25 (Currently Amended) The security system as claimed in Claim 19,

wherein the first electronic apparatus further comprises:

a first detecting device for detecting whether or not the second electronic apparatus is connected to the first electronic apparatus via the apparatus control line; and

a second detecting device for, when the first detecting device detects that the second electronic apparatus is connected to the first electronic apparatus, detecting whether or not the second electronic apparatus has the security function using a control signal of the

apparatus control line ~~when the first detecting device detects that the second electronic apparatus is connected to the first electronic apparatus, and~~

wherein the control device executes the detecting performed by ~~processings of~~ the first detecting device and the detecting performed by the second detecting device during the operation of the first electronic apparatus.

Claims 26 (Currently Amended) The security system as claimed in Claim 25, wherein, when the first detecting device detects that the second electronic apparatus is not connected to the first electronic apparatus, the control device stops ~~the~~ processing of the security function, and starts an ordinary operation of the first electronic apparatus ~~when the first detecting device detects that the second electronic apparatus is not connected to the first electronic apparatus.~~

Claims 27 (Currently Amended) The security system as claimed in Claim 26, wherein, when the second detecting device detects that the second electronic apparatus does not have the security function, the control device stops the processing of the security function, and starts the ordinary operation of the first electronic apparatus ~~when the second detecting device detects that the second electronic apparatus does not have the security function.~~

Claims 28 (Currently Amended) A first electronic apparatus of ~~provided in~~ a security system ~~for use in~~ used by a plurality of electronic apparatuses including [[a]] the first electronic apparatus and a second electronic apparatus connected to the first electronic apparatus ~~each other~~ via an apparatus control line,

wherein the second electronic apparatus ~~includes~~ comprises a second storage device for previously storing a password, ~~and~~

wherein the first electronic apparatus comprises:

_____ a first storage device for previously storing the password; and

_____ a control device for (i) requesting the second electronic apparatus to transmit the password stored in the second storage device, (ii) when the first electronic apparatus is activated or started up, receiving the password stored in the second storage device from the second electronic apparatus ~~when the first electronic apparatus is activated or started up,~~ (iii) comparing the ~~received~~ password ~~received from the second electronic apparatus~~ with the password stored in the first storage device, and (iv), when the password received from the second electronic apparatus coincides with the password stored in the first storage device, executing a security function so as to start an operation of the first electronic apparatus ~~when the passwords coincide with each other;~~

a display device for displaying a message to a user; and

_____ an input device for inputting the password,

wherein, when the password received from the second electronic apparatus does not coincide with the password stored in the first storage device, the control device displays, on the display device, a request for the user to input the password via the input device,

wherein the control device compares the password inputted by the user via the input device with the password stored in the first storage device, and

wherein, when the password inputted by the user coincides with the password stored in the first storage device, the control device starts the operation of the first electronic apparatus.

Claim 29 (Currently Amended) The first electronic apparatus ~~for a security system~~ as claimed in Claim 28, wherein, ~~when the password the control device compares the received from~~ the second electronic apparatus does not coincide ~~password~~ with the password stored in the first storage device, ~~the control device and~~ executes the security function so as to stop the operation of the first electronic apparatus ~~when the passwords do not coincide with each other.~~

Claims 30 (Cancelled)

Claim 31 (Currently Amended) The first electronic apparatus ~~for a security system~~ as claimed in Claim 28 ~~Claim 30~~, wherein, ~~when the control device compares~~ the password inputted by the user does not coincide with the password stored in the first storage device, the control device and stops the operation of the first electronic apparatus ~~when the passwords do not coincide with each other.~~

Claim 32 (Currently Amended) The first electronic apparatus ~~for a security system~~ as claimed in Claim 28 ~~Claim 30~~, wherein the control device compares the password inputted by the user a predetermined number of times of more than two with the password stored in the first storage device, and, when the password inputted by the user does not coincide with the password stored in the first storage device, the control device stops the operation of the first electronic apparatus ~~when the passwords do not coincide with each other.~~

Claim 33 (Currently Amended) The first electronic apparatus ~~for a security system~~ as claimed in Claim 28 ~~Claim 30~~,

wherein the first electronic apparatus further comprises a third storage device for previously storing a special password other than the password stored in the first storage device, and

wherein the control device compares the password inputted ~~password by the user~~ with the special password stored in the third storage device, and

wherein, when the password inputted by the user coincides with the special password stored in the third storage device, the control device starts the operation of the first electronic apparatus ~~when the passwords coincide with each other.~~

Claim 34 (Currently Amended) The first electronic apparatus ~~for a security system~~ as claimed in Claim 28,

wherein the first electronic apparatus further comprises:

a first detecting device for detecting whether or not the second electronic apparatus is connected to the first electronic apparatus via the apparatus control line; and

a second detecting device for, when the first detecting device detects that the second electronic apparatus is connected to the first electronic apparatus, detecting whether or not the second electronic apparatus has the security function using a control signal of the apparatus control line ~~when the first detecting device detects that the second electronic apparatus is connected to the first electronic apparatus~~, and

wherein the control device executes the detecting performed by ~~processings of~~ the first detecting device and the detecting performed by the second detecting device during the activation of the first electronic apparatus.

Claim 35 (Currently Amended) The first electronic apparatus for a security system as claimed in Claim 34, wherein, when the first detecting device detects that the second electronic apparatus is not connected to the first electronic apparatus, the control device stops the processing of the security function, and starts an ordinary operation of the first electronic apparatus ~~when the first detecting device detects that the second electronic apparatus is not connected to the first electronic apparatus.~~

Claim 36 (Currently Amended) The first electronic apparatus for a security system as claimed in Claim 35, wherein, when the second detecting device detects that the second electronic apparatus does not have the security function, the control device stops the processing of the security function, and starts the ordinary operation of the first electronic apparatus ~~when the second detecting device detects that the second electronic apparatus does not have the security function.~~
